

SANJAY BENIWAL

Software Engineer | AI-Assisted Development | Web & Game Development

beniwalssanjay@gmail.com · GitHub: stonedtalesdivision · India

PROFESSIONAL SUMMARY

Practical software developer with hands-on experience building, debugging, and iterating on web and game-development projects using AI-assisted development workflows. Experienced in frontend development, JavaScript-based applications, GitHub repositories, API integration, software debugging, C# scripting, Unity development, and designing technical systems for interactive applications.

Strong ability to work with AI coding tools to analyze existing codebases, identify problems, implement fixes, generate reusable scripts, and rapidly prototype software features. Interested in Software Engineering, AI Training, AI Code Evaluation, Frontend Engineering, and developer-tooling roles.

TECHNICAL SKILLS

Programming & Web: JavaScript · HTML5 · CSS3 · C# · Frontend development · Responsive web development · API integration · Debugging & troubleshooting

Software Development: Git · GitHub · Code review · Bug identification and resolution · Feature implementation · Existing-codebase analysis · Rapid prototyping · Software architecture · AI-assisted programming

AI & AI Training: Prompt engineering · AI-generated code evaluation · Comparing and improving AI-generated solutions · Technical problem decomposition · AI-assisted software development

Game Development: Unity · C# · Gameplay scripting · Game-system architecture · AI behaviour design · Character systems · Third-person gameplay systems · Mobile-first game design

SELECTED PROJECTS

SONGISTAN — Web Music Platform | Developer / Project Builder

- Built and iterated on a web-based music streaming interface focused on playlist discovery and playback.
- Implemented YouTube API integration for dynamically retrieving playlist content.
- Developed interactive playback functionality including play, pause, previous/next, auto-next, volume, mute, seeking and queue behaviour.
- Implemented session and playback-position persistence, including resuming playback after closing and reopening the application.
- Worked with environment variables for API-key configuration and deployment.
- Debugged deployment and production issues while iterating toward a launch-ready application.
- Used AI-assisted development to accelerate implementation, debugging and feature refinement.

AMRIT: 187 — Cinematic Action Game | Game Designer / Technical Developer

- Designed the technical foundation for a smartphone-first third-person action game using Unreal Engine 5 as the target production engine.
- Developed gameplay-system specifications covering character switching, AI partners, combat, enemy behaviour, mobile HUD systems and companion AI.
- Designed an AI-controlled companion system with distinct follow, detection, warning, attack and retreat behaviours.
- Defined reusable gameplay architecture for characters, AI, weapons, abilities, enemies, environments, UI, missions and data systems.
- Planned C++ core systems with Blueprints for rapid gameplay iteration.
- Previously developed and tested Unity/C# scripting workflows, including replacing legacy scripts and troubleshooting project/runtime issues.
- Used an implementation-first, AI-assisted development workflow to rapidly prototype and debug game systems.

SOFTWARE DEVELOPMENT EXPERIENCE

Independent Software Developer — Self-Directed Projects

- Build software projects from requirements through implementation, testing and iterative debugging.
- Analyze existing projects and repositories to identify implementation problems and determine practical fixes.

- Use AI-assisted development to generate, refactor and troubleshoot code while reviewing and testing the resulting implementation.
- Work across frontend web development and game-development environments.
- Translate high-level product ideas into concrete technical requirements, system structures and implementation tasks.
- Rapidly learn unfamiliar technologies when required by a project.
- Maintain an implementation-focused workflow emphasizing working software, testing and iterative improvement.

CORE STRENGTHS

Problem Solving: Breaks complex software problems into practical implementation steps.

Debugging: Comfortable investigating errors, broken functionality and integration issues.

AI-Assisted Engineering: Uses AI as a development accelerator while reviewing and testing generated solutions.

Rapid Prototyping: Able to move quickly from an idea or specification to a working prototype.

Technical Adaptability: Comfortable moving between web, game and AI-assisted development environments.

Product Thinking: Considers usability and end-user behaviour alongside implementation.

Independent Development: Experienced in taking ownership of projects and iterating without requiring a large development team.

TOOLS & TECHNOLOGIES

JavaScript · HTML · CSS · C# · Unity · Unreal Engine 5 · Git · GitHub · YouTube API · REST/API Integration · Environment Variables · AI Coding Tools

EDUCATION

B.Tech — Mechanical Engineering

Arya College of Engineering & IT · Rajasthan Technical University, Kota · 2017

TARGET ROLES

Software Engineer · AI Training Engineer · AI Code Evaluator · Frontend Software Engineer · C# Developer · Game/Interactive Software Developer
